Option A:
In this model, the primary action is definitely obvious and effectively displayed on the screen. The layout is also very easy and the labels are perfect. In terms of contrast I don't mind it too much. I like the contrast in the top picture a little bit more than the bottom because the top picture has a green button at the bottom versus the blue. This color scheme doesn't really match the user and we are intending our audience to be highschool/college kids and I feel these colors give off 2006 facebook vibes. But other than that, nothing from this style should confuse or slow down users.
Option B:
We really like this option because the colors contrast great and it definitely gives off a newer technological application that is easy to navigate. The layout is very easy to navigate and I believe the users should have zero issues working through our website. Labels are clear and it definitely fits the context of use. The dark colors make all the important buttons stand out a little more compared to the white. We will most definitely be using this layout.
Option C:
This option is pretty much identical to option A. For some reason our LLM kept making the 3rd option similar to the first, we tried to make more. So as I mentioned above, everything is very clear and easily labeled for this option. Its bright and white background colors just make it seem very old and it almost bores the user.

AI Prompt:

You are designing a high-fidelity SaaS web application UI for a student project accountability tool called Responsiboard.

🔒 Hard Requirements (DO NOT VIOLATE)

- Keep the existing screen structure and flows exactly the same
- Do not add or remove features
- Do not change navigation labels
- Only improve visual design, spacing, typography, and styling
- Desktop web layout
- Clean, production-ready UI

🎨 Visual Direction — Option B (Bold, Modern, High-Contrast)

Create a modern, high-energy SaaS dashboard aesthetic inspired by:

- Linear.app
- Vercel dashboard
- Modern fintech tools

Color System

- Primary background: deep navy or dark blue gradient
- Primary accent: electric blue
- Success/CTA accent: vibrant green
- Text: high-contrast light text on dark surfaces
- Cards: slightly lighter dark surface with soft elevation
- Use subtle glow or highlight for primary actions

Typography

- Font: Inter or Poppins
- Strong hierarchy
- Bold section headers
- Clean readable body text

Components

- Rounded corners (8–12px radius)
- Soft shadows or glassy elevation
- Modern button styling
- Clear hover and focus states

- Professional SaaS density (not overly spacious, not cramped)

🖥️ Screen 1 — Projects Page

Layout (keep exactly):

Header:

- Responsiboard logo left
- Nav items right: Homepage, Projects, Search Friends, Privacy & Cookies
- Active tab highlighted
- Logout on right

Body:

- Page title: “Projects”
- Project list in card/table style
    - Row: Project name left
    - Bright “Open” button right
- Large centered green button: Create New Project
- Bottom right: Next button
- Footer with Terms | Privacy | Contact

Styling goals:

- Strong visual hierarchy
- Card-based modern layout
- High-contrast buttons
- Polished SaaS feel

🖥️ Screen 2 — New Project Page

Layout (keep exactly):

Header: same as Projects page

Body:

- Title: “New Project”

- Top-right button: Rename Project
- Vertical stack of action buttons:
    - Invite Friends
    - Set Deadlines
    - Upload Documents
    - Workload Checklist
    - Insert Notes
- Primary bottom button: Create

Footer: same as Projects page

Styling goals:

- Bold action buttons
- Clear primary vs secondary emphasis
- Modern dashboard feel
- Consistent spacing rhythm

✨ Interaction & Polish

Include:

- Subtle hover states
- Focus states for accessibility
- Consistent spacing scale
- Clean alignment
- Production-ready visual polish

🎯 Mood Keywords

bold
modern
high-contrast
startup SaaS
confident
productivity-focused

Output:
Produce pixel-perfect desktop UI mockups for both screens in this style.
